

INDEX

Summary of the interim report	1
[1] Research objectives	2
[2] Background and philosophy of the project	3
[3] Contents and Methodology	4
(1) Methods	4
(2) Subject areas	5
(3) Organization of the project	6
(4) Contents	7
[4] Time schedule and budget	10
[5] Progress of the project	11
(1) Results obtained up to now	11
(2) Changes in the project plan	15
(3) Publications	15
[6] Future activities	17
(1) Expected outcomes	17
(2) Activities in the latter period of the project	17
(3) Problems in implementing the project	18
(4) Toward the final outcome of the project	18
Results of Response-Prediction Model Working Group	
• Application of process-based model of biogeochemical cycling in forest watershed in Hokkaido, northern Japan	19
• The influence of forest disturbance and examination of applying the PnET model for the long-term influences	24
• Necessity for consideration on hydrological controls of biogeochemical cycling to develop a catchment scale ecosystem model	27
• Quantitative approach and problems of river hydrological simulation	36
• Characters of nutrient load from influent rivers of Lake Shumarinai	39
• Development of biogeochemical model coupled with hydrodynamic model of Lake Shumarinai	43
• Factors influencing early vegetation establishment following soil-scarification in a mixed forest of northern Japan	50
• Studies on the past environmental changes of the Lake Shumarinai watershed by dendrochronological analyses	53
• Vegetation history during the last 10000 years in the watershed of the Uryu Experimental Forest of Hokkaido University	56
• Japan-wide stream chemistry monitoring (JWSM) 2003	61

• Dynamics of planktonic communities in Lake Shumarinai Shumarinai	70
Results of IDEA Working Group	
• Transformation module	75
• Interests of residents in the watershed environment of the Lake Shumarinai	78
• Theoretical Analysis on People's Environmental Concerns in the Watershed	84
• Sample Survey on Interests in Watershed Environment	92
• The 5-2 project's significance consideration from the viewpoint of the control theory's application	100
Sample survey on interests in watershed environment (overview, questions and tabulations)	108
